

JEWELLERY PHOTOGRAPHY SYSTEM

Alphashot Micro V2

Studio-quality stills, 360° spins and videos of jewellery, watches and gemstones — captured, retouched and published in minutes, entirely in-house.

100%

In-house product content creation — full control, no logistics

3

Types of content from one device: stills, 360° spins & videos

9+

Add-on accessories for the highest-quality results

Introduction

The Alphashot Micro V2 is a dedicated, automated photography studio purpose-built for small, shiny and transparent products — rings, chains, earrings, gemstones and watches up to 18 cm. Integrated hardware and software control the camera, lighting and turntable, remove backgrounds automatically, and polish every image with built-in post-production tools. No professional photography experience required — after a short training, anyone on your team can produce publish-ready jewellery imagery at record speed.

Top Features

Software-controlled hardware

Your computer is the control hub — adjust camera and light settings or pre-programme turntable angles straight from your laptop.

Automatic background removal

Crisp, clean backgrounds generated automatically — no manual clipping paths, no outsourcing.

Complex lighting for sparkle

Dedicated LEDs make gemstones shine, while movable LED panels and spot lamps deliver smooth light across reflective surfaces.

Automatic post-production

From basic edits to selective colour fine-tuning, software automation refines every shot and adds the final polish.

Consistency with templates

Store your entire workflow — shooting, post-production, publication — and repeat the identical setup for consistent content.

Multi-destination publishing

Publish directly to your online store or export for print and marketing — seamlessly, in the background.

Choose your model

	MICRO V2	MICRO PRO V2
Stills, 360° spins & video	●	●
Automated lighting & turntable	●	●
Gemstone LEDs & spot lamps	●	●
Backlit LED doors	—	●
Additional spotlight	—	●

Both models share the same core machine. The **Pro V2** adds backlit LED doors — for stronger lighting contrast and soft side reflections — plus an additional spotlight for focused light effects.

MICRO V2 VS MICRO PRO V2 — THE BACKLIT DOOR DIFFERENCE

Specifications

DIMENSIONS	83 cm × 54 cm × 72 cm (W × D × H)

Accessories

Spotlight kit
Add lighting effects and choose between diffused or focused light enhancement.

Black, white or glass table
Photograph in different environments with dedicated interchangeable tables.

Jewellery accessories
Accessories for earrings, pendants, rings and small necklaces included.

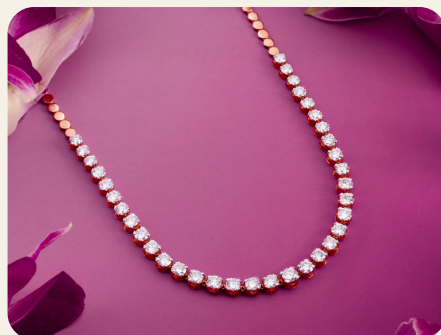

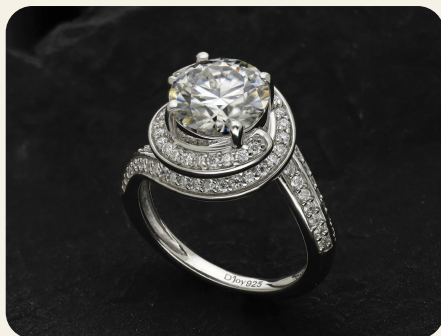

Nylon string support
Suspend earrings and other difficult products with nylon strings and a dedicated support mount.

Chain & necklace support
Hang chains and necklaces on a semi-transparent support that stays invisible in the final image.

Standard doors
Lightweight and easy to install, with silver or black side reflectors for additional effects.

Subscription Policy — in a nutshell

Orbitvu Station software with AI features is offered on a subscription basis, keeping your machine updated with the latest features, improvements and support.

AI OCR (Beta)

Instantly scans up to 6 product labels in the Edit tab, extracting part numbers, contents and volumetric data into image metadata.

AI Retoucher (Beta)

Removes scratches, fingerprints and stray reflections while keeping stones, shape and proportions real. Soft or heavy correction — days of retouching become minutes.

AI Masking Tool

Embedded in the Live Capture tab for seamless presets.

If you choose not to renew, your machine does not stop working. It continues on the fallback software — the last version at the end of your purchase year — so your core capture functions always remain available.
